Education

Thapar Institute of Engineering and Technology Sep 2022 – May 2026
Bachelor of Technology (B.Tech) in Computer Engineering *Patiala, India*
- Coursework: Data Structures, Algorithms, OS, DBMS, Network Programming, NLP; Elective: Conversational AI.

Experience

Software Engineer Nov 2026 – Present
Belzabar Software
- Invented a **cross-platform AI-agent CLI** (Bun, TypeScript) abstracting complex internal platform logic into a reusable toolchain for coding agents, cutting **AI token usage by 25–35%** for every developer using it.
- Built a **cross-browser developer-tools extension** (Chrome, Firefox) that reduced each API investigation from **15–60s to 2s**, plus editors and code-sharing tools.
- Found and fixed critical **cross-site scripting (XSS) and SQL injection** vulnerabilities; optimized key **SQL queries**.
- Delivered **190+ tickets** (features, fixes, RCAs) across **monthly production releases**, owning implementation, QA, and migrations.

Software Engineer Intern Nov 2025 – Oct 2026
Belzabar Software
- Contributed to a **scalable PostgreSQL-based storage and query system** over **6M+ records** with auditing of state-level changes, enabling traceability and production observability.
- Built and deployed **Java + SpEL backend workflows** on **Apache Tomcat** across **150+ REST APIs**, improving system efficiency for platforms serving **100K+ users**.

Fullstack DevOps Engineer Aug 2024 – Oct 2024
PLEX (Remote)
- Architected **microservices in Go + gRPC** backed by **PostgreSQL + Redis**, reducing latency by **60%**.
- Automated deployments with **CI/CD (GitHub Actions)** on **AWS EC2 + S3**, cutting release cycles by **70%**.
- Delivered a scalable platform serving **10,000+ users**, improving operations by **40%**.

Software Developer Intern: AI Services Jun 2024 – Jul 2024
CodeMate.AI (Remote)
- Built backend AI workflows using **LangChain and Pinecone** (vector DB), enabling contextual debugging and boosting developer productivity by **35%**.
- Contributed to an **Auto-Documentor service** generating API documentation on code pushes, raising coverage by **70%**.

Projects

Devex | *Cloud IDE Platform (Distributed Infra)* [Link] Jun 2025 – Present
- Designed a **cloud-native platform** launching isolated environments in **5–10s** using **Go, Docker, Kubernetes**.
- Configured **Kubernetes Ingress, TLS (cert-manager), and S3** for secure multi-tenant access.
- Built **Redis-based distributed state management** and optimized concurrent resource allocation.
- Adopted by **150+ developers**, supporting **200+ concurrent sessions**; **70+ GitHub stars**.

Golphin | *Embedded Database Engine in Go* [Link] Aug 2026 – Present
- Built a **key-value database engine in Go** from scratch using **Write-Ahead Logging (WAL) storage**, segmentation, and compaction; sustains **240K+ ops/s**.
- Implemented **AVL-tree indexing with on-disk snapshots**, with **$\sim$24 μs ordered range scans**; CLI and server modes.
- Added **CI** running **30+ tests and 10+ benchmarks** with per-commit performance tracking.

Zenith AI | *Hiring Platform Backend* [Link] Dec 2024 – Mar 2025
- Built backend with **FastAPI + Next.js** achieving **78%+ ranking accuracy**.
- Processed **100+ resumes** via **RAG + vector search (Upstash)**, reducing screening time by **70%**.

Technical Skills

Languages: Go, Java, Python, Rust, C++, TypeScript, SQL
Backend & APIs: REST, gRPC, Microservices, Distributed Systems, FastAPI, Node.js, Express.js, Kafka, SpEL, Apache Tomcat
Databases: PostgreSQL, MySQL, Redis, MongoDB, ChromaDB, JSONB — relational & NoSQL data modeling
Cloud & DevOps: AWS (EC2/S3), Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins, AWS Glue, Linux, Git, Grafana
Security & Reliability: XSS/SQL injection remediation, API authentication/authorization, auditing & traceability, observability
AI Systems: RAG, MCP, ACP, A2A, multi-agent orchestration, AI agent tooling, CLI & browser-extension development

Achievements

Smart India Hackathon '24 — National Winner [Certificate] Dec 2024
- 1st of **400+ teams** in Disaster Management; built a BLE-enabled alert system with a scalable backend (PostgreSQL, Firebase) hitting **1.8s** latency.
